

The perfect complement for all STAHL flatwork ironers with a roll diameter of 400 to 2010 mm.

# DOMESTIC

The folding machine for a fast and excellent linen finish

# DOMESTIC – linen folding in comfort

The already excellent linen finish is perfected with our DOMESTIC folding machine, which is available in the working widths of 175, 210, 250, 270, 300, 330, 350 and 400 cm.

The horizontal folding machine can be described as the perfect complement for all STAHL flatwork ironers with a roll diameter of 400 mm to 2010 mm. This high-performance finish combination saves time, staff and money in institutions like laundries, hotels and hospitals, where large amounts of linen have to be processed accurately and quickly.

The unpleasant task of folding hot linen from the ironer is replaced by a convenient and time saving technology. The linen is treated with care since it is not folded by mechanical folding plates but by a hot air stream. This translates into less tear and wear and longer life of the linen.

The dimensions of the linen pieces are constantly checked by photocells. The finish length is calculated automatically and the linen is folded accordingly. Up to three lines with varying types of linen and folding techniques can be operated at the same time side by side.

## Pioneering control unit *FREEpro*

DOMESTIC is controlled by means of the state of the art microprocessor control unit *FREEpro*, which was developed by us. It is equipped with 12 standard programs, enabling it to deal with the most common textiles and folding techniques. In addition it is completely freely programmable according to the customers requirements while at the same time it is still extremely easy to operate. One of the features guaranteeing this is the easy-to-read plain language display, which continuously informs the operator about the current state of the process.

Our washer-extractors and drying tumblers are also controlled by the *FREEpro*. The advantage is that you can easily control three different procedures using one identical structure.

## Made by STAHL

We are a company with a long tradition and are now manufacturing laundry machines in the fourth generation. We are a dynamic, competent family operation with clear principles. Quality is the most important one, closely followed by innovation and the demand for economically and technically perfected products.

Our local team vouches for these principles, as Made by STAHL is for us implies the quality inherent in Made in Germany.

Of course, our commitment to quality also extends to the protection of our environment. We guarantee the separability of the materials for recycling purposes as well as the application of ecologically save production methods. This includes the use of powder coating instead of varnishes, which has the further advantage of greater durability. Our greatest contribution to environmental protection, however, is the long service life of our products.
